

ri.uvt.ro User Types and Access Analysis

Audit date: 2026-04-25

Scope: current public site behavior only. This analysis is based on the live public routes and publicly exposed WordPress structure.

1. Current access model

Observed today:

- The site is primarily public and anonymous.
- No public login, account, dashboard, or applicant portal route was found on `ri.uvt.ro`.
- Many real actions happen outside the site:
admission platforms, scholarship platforms, downloadable forms, and email.
- An internal admin/editor backend is strongly implied because the site exposes WordPress, Elementor, WPML, REST API endpoints, and `/wp-admin/admin-ajax.php` references.

Conclusion:

- There is no visible end-user account model on the current site.
- There is almost certainly an internal CMS admin/editor account model for DRI staff.

2. Main user types

Public-facing user types

User type	Main goal	What they can do on the current site	Limits today
General visitor	Understand what DRI does	Browse sections, read overview pages, find contact information	No guided path, content is broad and file-heavy
Incoming Erasmus student	Learn how to come to UVT	Reach Erasmus pages, accommodation, academic calendar, departmental coordinators, online application info	Much of the journey jumps to English pages, PDFs, and external forms

User type	Main goal	What they can do on the current site	Limits today
Outgoing UVT student	Apply for mobility and understand next steps	Access application info, available places, ECTS documents, BIP pages, mobility stories	Duplicate route trees and legacy pages create confusion
Incoming full-degree international student, non-EU	Understand admission, scholarships, documents	Access non-EU page, scholarship page, preparatory year, application forms, methodology files	Mostly document-driven, high cognitive load
Incoming full-degree student, EU	Find procedure and required forms	Reach EU-specific page and forms	Weak cross-linking and minimal step-by-step guidance
Special-case applicant from Ukraine	Find special admission guidance	Reach dedicated page and linked files	Limited integration with the rest of the journey
Refugee / asylum seeker	Identify applicable admission path	Reach dedicated page and branch toward EU or non-EU flows	Still document-first, not workflow-first
Academic staff, incoming or outgoing	Find mobility/training information	Access teaching/training mobility pages and yearly offers	Many pages are historical archives rather than clean current calls
International partner	Find agreements, lecturers, visiting programme info	Reach partnership pages and Visiting@UVT documents	Very little guided CTA structure

Internal user types inferred from the CMS

User type	Likely need	What they likely do today
DRI content editor	Update page text, upload files, maintain menus	Publish and edit pages, documents, stories, yearly calls
Translator / bilingual editor	Maintain Romanian and English content	Manage translated versions and language routing
Technical site admin	Keep WordPress site running	Manage plugins, themes, redirects, user roles, forms, SEO settings

3. Is there an admin account?

Publicly visible answer:

- No public admin account is advertised to users.
- No public user account or member area was found.

Reasoned technical answer:

- Yes, an internal admin or editor account almost certainly exists.
- Evidence:
the site exposes WordPress page APIs, uses Elementor and WPML, and references `/wp-admin/admin-ajax.php`.

This means the real distinction today is not `user vs admin` in a portal sense. It is closer to:

- anonymous public visitor
- internal content editor
- internal technical administrator

4. What admin should have in addition to a normal user

If the site remains mainly informational, the admin role should have capabilities that public visitors do not have:

- create, edit, publish, unpublish, archive pages
- upload and replace files without breaking old links
- manage navigation menus and footer links
- manage redirects from old routes to canonical routes
- manage language versions and translation mapping
- manage forms, newsletter embeds, and external application links
- manage SEO settings, including indexability and metadata
- manage media library and document versioning
- manage user roles and permissions
- review analytics and broken-link reports

The admin should also have operational responsibilities:

- remove test pages from production
- retire outdated yearly calls
- keep only one canonical route per content area

- verify all CTAs before publishing

5. Recommended role model for the redesign

The redesign should avoid one all-powerful generic admin if possible.

Recommended roles:

Role	Should be able to do	Should not be able to do
Public user	Browse content, filter by audience, download documents, follow clear next steps	Edit content or access backend
Applicant or participant, only if a portal is later added	Save progress, see deadlines, upload documents, track status	Change site structure or global content
DRI editor	Edit pages, stories, deadlines, document lists, contact cards	Change plugins, system settings, or user permissions
Translator	Edit localized content and language mapping	Publish unrelated system changes
Programme manager	Update specific programme sections and yearly calls	Change global SEO or technical configuration
Site admin	Manage technical settings, plugins, redirects, roles, indexing, backups	This is the highest-permission role

6. What each user type should ideally be able to do

This is the gap between the current site and a stronger future version.

Public visitor

- choose an audience path immediately from the homepage
- see deadlines, eligibility, documents, and next step in one place
- switch language without losing context

Incoming Erasmus student

- follow a structured flow:
eligibility -> nomination -> application -> accommodation -> arrival -> academic calendar

- download only the files relevant to the current step

Outgoing UVT student

- compare destinations
- see calls and deadlines by year
- move through selection, paperwork, funding, and completion as one journey

International applicant

- choose the right admission path by citizenship/profile
- see a checklist instead of a long document wall
- move from information to application without leaving the information architecture abruptly

Staff user

- see teaching and training mobility separately
- filter current calls from archived offers
- find required documents and contact persons fast

Partner user

- understand agreement process, contact points, and Visiting@UVT entry points
- access faculty-specific opportunities from one structured page

7. Main findings

- The current site has multiple public audiences, but almost all of them are treated as anonymous readers.
- The current site does not expose a true end-user account system.
- The only clearly inferable privileged role is an internal CMS admin/editor layer.
- For the redesign, the most useful role split is:
public visitor, content editor, translator/programme manager, technical admin.

- If a future portal is planned, applicant or participant accounts should be added only for transactional flows, not for simple reading.
