

ri.uvt.ro Static vs Dynamic Content Decision List

Date: 2026-05-04

Scope: Phase 2 content-model decisions for deciding what should be managed as static structure versus dynamic content.

1. Decision framework

The platform should separate content by editorial behavior, not only by subject.

Core rule:

- if the content is evergreen, hierarchical, and part of the user journey, it should be static page content
- if the content is repeatable, time-based, filterable, or reused across multiple sections, it should be dynamic structured content

2. Static Pages

Use WordPress **Pages** for content that is evergreen, hierarchical, and navigational.

Recommended page content:

- home
- about and all about children
- Erasmus overview pages
- international admissions overview pages
- partnership overview pages
- programme overview page
- contact
- search landing page
- HTML sitemap page
- legal and policy pages

Why these stay static:

- they define the main site tree
- they change less often than opportunities or news
- they should support parent-child navigation
- they work best with breadcrumb and section-menu behavior

3. Posts

Use default WordPress **Posts** only for dated institutional news.

Recommended post content:

- news
- announcements
- press-style updates
- editorial deadline reminders that behave like updates rather than full records

Why these should use Posts:

- native WordPress posts are date-oriented
- archives and chronological ordering come naturally
- categories and tags are already appropriate for this content type

4. Custom Post Types

Use Custom Post Types for repeatable structured content that should not live as child pages.

call

Use for:

- Erasmus calls
- BIP offers
- staff training week offers
- scholarships with deadlines
- yearly mobility opportunities

Why:

- calls are time-based
- they need filtering by year, audience, and topic
- they should be reusable across multiple hub pages

story

Use for:

- student mobility stories
- international student stories
- staff experience stories

Why:

- stories are repeatable editorial entries
- they should be browsed through an archive rather than buried in page trees

resource

Use for:

- forms
- methodologies
- regulations
- downloadable templates
- application guides
- academic calendar documents

Why:

- resources need metadata, file handling, and topic filtering
- they should be attachable to many hub pages without duplicating content

programme

Use for:

- AUF
- Fulbright
- DAAD
- ACBS
- other named recurring programmes

Why:

- programmes behave like reusable records
- each may need summary, eligibility, links, contacts, and related resources

Optional person

Use for:

- DRI team members
- coordinators
- contact persons

Why:

- person data is reusable across many pages
- structured person records reduce editorial duplication

5. Taxonomies

Use custom taxonomies for cross-cutting filters.

Recommended taxonomies:

- `audience`
incoming-students, outgoing-students, incoming-staff, outgoing-staff, international-applicants, partners
- `admission-path`
non-eu, eu, ukraine, refugees, romanian-diplomas-abroad, free-movers
- `programme-family`
erasmus, fulbright, daad, auf, acbs, eugen-ionescu, other
- `content-topic`
application, accommodation, funding, academic-calendar, documents, agreements, scholarships
- `academic-year`
2026-2027, 2027-2028, and later yearly labels

Use built-in WordPress `category` and `tag` only for Posts.

6. Structured fields

Use structured fields when content belongs inside a page or entry rather than becoming a page of its own.

Recommended structured fields:

- hero title, eyebrow, summary
- page intro and key facts
- CTA cards

- process steps
- eligibility checklist
- required documents repeater
- deadlines repeater
- external application URL
- downloadable files list
- FAQ items
- related contacts
- related calls
- related resources
- related stories
- SEO metadata

7. Content-type decision table

Content example	Best format	Reason
---	---	---
Erasmus incoming overview	Page	Evergreen, hierarchical, part of main journey
Non-EU required documents	Page with structured fields	Journey step with repeatable subcontent
Annual Erasmus call	CPT <code>call</code>	Time-based, filterable, reusable
Mobility story	CPT <code>story</code>	Repeatable editorial content
Academic calendar PDF	CPT <code>resource</code>	Downloadable record with metadata
Institutional news item	Post	Chronological update content
DRI contact card	Structured field or optional CPT <code>person</code>	Reusable across multiple pages

8. Final recommendation

The site should use static pages for structure, posts for dated news, custom post types for repeatable collections, taxonomies for filtering, and structured fields for reusable page components. This creates a cleaner editorial model and prevents the future site from falling back into the current file-library pattern.
