

RI.UVT.RO Redesign

Role 6 — Main Branch Changes (Updated)

Directia de Relatii Internationale
West University of Timisoara

Focus: Updated specification of what currently exists in the role6 branch, what field name conflicts exist between the committed ACF JSON and the plan, and the complete list of corrections and additions required before any PR into main can be merged.

Technology Stack: WordPress CMS + REST API + React + Vite + TypeScript

Team Q-UW9 | Generated: 2026-05-17

1. What Currently Exists in the Role6 Branch

1.1 WordPress Backend

`cptui-export.json` — present at repo root (wrong path). CPT configuration as committed:

CPT	show_in_rest	has_archive	Taxonomies	excerpt
programmes	true	false	None	No
calls	true	false	None	No
stories	true	false	None	No
resources	true	false	None	No

No taxonomy export in the file. No people CPT.

ACF field groups — 4 files in `wp-content/themes/twentytwentyfive/acf-json/`. All have `show_in_rest`: 1. Field names as actually committed:

Group title	CPT rule	Fields in JSON
Call Details	<code>post_type == calls</code>	<code>application_deadline</code> (date), <code>financial_support</code> (text)
Programme Details	<code>post_type == programmes</code>	<code>field_1_deadline</code> (date — broken), <code>country</code> (select, empty), <code>coordinator_email</code> (email)
Resource Details	<code>post_type == resources</code>	<code>download_url</code> (url), <code>document_type</code> (select, malformed)
Story Details	<code>post_type == stories</code>	<code>testimonial_author</code> (text), <code>study_destination</code> (text)

1.2 Documentation

File	Lines	Quality
<code>wordpress-content-structure-notes.md</code>	8	Strategy statement only; no route table

File	Lines	Quality
rest-api-exposure-checklist.md	6	4 checkbox statements; no URLs, no field names
static-vs-dynamic-content.md	12	3 static + 4 dynamic entries; incomplete
wordpress-cpt-taxonomy-setup.md	11	Taxonomy descriptions only; no CPT config
structured-fields-setup.md	6	Field names inconsistent with ACF JSON and plan

1.3 Frontend

frontend/src/api/wordpress.js is unchanged from Week 3. Only `getPosts()` and `getPost(slug)`.

2. Field Name Conflicts: Role6 vs Plan

These conflicts must be reconciled and frozen before Role 5 writes any API helpers. Changing field names after the helpers are written breaks the frontend integration.

2.1 Calls

Field	Plan name	Role6 name	JSON	Verdict
Deadline	deadline	application_deadline	—	Rename or accept
Eligibility	eligibility	—	—	Add
Application steps	application_steps	—	—	Add
Documents	documents	—	—	Add
Financial support	—	financial_support	—	Keep or remove

2.2 Programmes

Field	Plan name	Role6 name	JSON	Verdict
Duration	duration	—		Add
Language	language	—		Add
Partner institution	partner_institution	—		Add
Application deadline	application_deadline	field_1:_deadline		Fix broken name
Country	—	country		Keep or remove
Coordinator email	—	coordinator_email		Keep or remove

2.3 Resources

Field	Plan name	Role6 name	JSON	Verdict
File URL	file_url	download_url		Rename
File type	file_type	document_type		Rename + fix choices
Audience notes	audience_notes	—		Add

2.4 Stories

Field	Plan name	Role6 name	JSON	Verdict
Author	author	testimonial_author		Rename
Story date	story_date	study_destination		Replace entirely
Pull quote	pull_quote	—		Add

3. What Must Be Fixed Before Merging to Main

3.1 Folder Structure

Move the WordPress installation into `wordpress/ro.uvt.ri/` to match the main branch convention. Move `cptui-export.json` to `wordpress/ro.uvt.ri/cptui-export.json`.

3.2 CPTUI Configuration Fixes

The following changes must be made in WordPress admin and re-exported.

All 4 existing CPTs: set `has_archive: true`; add `excerpt` to supports.

Taxonomy attachments to add via CPTUI:

Taxonomy	Attach to
audience	calls, stories, resources, programmes
programme-family	programmes
content-topic	resources, stories
academic-year	calls, resources

Register people CPT if approved by Role 1, with `show_in_rest: true`. After all changes, re-export both post types and taxonomies to `wordpress/ro.uvt.ri/cptui-export.json` and commit.

3.3 ACF Field Group Corrections

Field names must be agreed with Role 5 before applying. Recommended resolution: align to plan names for consistency with documentation.

Calls group — rework:

Action	Field name	Type
Rename from	<code>deadline</code>	Date picker
	<code>application_deadline</code>	
Add	<code>eligibility</code>	Textarea
Add	<code>application_steps</code>	Repeater → text sub-field
Add	<code>documents</code>	Repeater → label (text) + url (url)
Decide: keep or re-move	<code>financial_support</code>	Text

Programmes group — rework:

Action	Field name	Type
Fix from field_1:_deadline	application_deadline	Date picker
Add	duration	Text
Add	language	Text
Add	partner_institution	Text
Decide: keep or re-move	country	Select
Decide: keep or re-move	coordinator_email	Email

Resources group — rework:

Action	Field name	Type
Rename from download_url	file_url	URL
Rename + fix choices	file_type	Select: PDF / DOCX / XLS / Other
Add	audience_notes	Textarea

Stories group — rework:

Action	Field name	Type
Rename from testimonial_author	author	Text
Replace study_destination	story_date	Date picker
Add	pull_quote	Textarea

After all changes: re-save each group to regenerate acf-json/*.json files. Commit updated files.

3.4 New Global ACF Field Groups

Five field groups must be created for use across WP Pages. All with `show_in_rest: 1`.

Group	Fields
CTA block	heading (text), body (textarea), button_label (text), button_url (url)
Process steps	steps repeater → step_title (text) + step_description (textarea)
FAQ section	faqs repeater → question (text) + answer (textarea)
Contact card	name (text), role (text), email (email), phone (text)
Document repeater	label (text) + file_url (url)

Re-save to write `acf-json/` files. Commit 5 new JSON files.

3.5 Documentation Rewrites

All 5 files must be substantially rewritten. `rest-api-exposure-checklist.md` is the most critical — it is the contract document Role 5 uses to write API helpers.

Required endpoint table for `rest-api-exposure-checklist.md`:

Endpoint	Type	ACF fields	Query params
<code>/wp-json/wp/v2/pages</code>	Default WP	No	?slug=
<code>/wp-json/wp/v2/posts</code>	Default WP	No	?slug=, ?per_page=
<code>/wp-json/wp/v2/calls</code>	CPT	Yes	?slug=, ?audience=, ?academic-year=
<code>/wp-json/wp/v2/stories</code>	CPT	Yes	?slug=, ?audience=, ?content-topic=
<code>/wp-json/wp/v2/resources</code>	CPT	Yes	?slug=, ?audience=, ?content-topic=, ?academic-year=
<code>/wp-json/wp/v2/programmes</code>	CPT	Yes	?slug=, ?audience=, ?programme-family=

For each CPT endpoint the `acf` object must list the exact field names as agreed and frozen after Section 3 above is resolved.

3.6 Frontend API Helpers

Do not write these until field names are finalised and committed.

```
// Pages
getPages() // GET /wp-json/wp/v2/pages
getPage(slug) // GET /wp-json/wp/v2/pages?slug={slug}

// Calls
getCalls(params?) // GET /wp-json/wp/v2/calls
getCall(slug) // GET /wp-json/wp/v2/calls?slug={slug}

// Programmes
getProgrammes(params?) // GET /wp-json/wp/v2/programmes
getProgramme(slug) // GET /wp-json/wp/v2/programmes?slug={slug}

// Resources
getResources(params?) // GET /wp-json/wp/v2/resources
getResource(slug) // GET /wp-json/wp/v2/resources?slug={slug}

// Stories
getStories(params?) // GET /wp-json/wp/v2/stories
getStory(slug) // GET /wp-json/wp/v2/stories?slug={slug}
```

`params` must support taxonomy filter keys: `audience`, `programme-family`, `content-topic`, `academic-year`.

3.7 Test Entries

At least one published entry per CPT with all fields populated.

CPT	Minimum
<code>calls</code>	1
<code>stories</code>	1
<code>resources</code>	1
<code>programmes</code>	1
<code>people</code>	1 (if approved)

4. Merge Readiness Checklist

- ☐ WordPress in `wordpress/ro.uvt.ri/` — folder structure matches main
- ☐ `cptui-export.json` at `wordpress/ro.uvt.ri/cptui-export.json` — includes post types **and** taxonomies
- ☐ All 4 CPTs: `has_archive: true`, `excerpt` in supports, taxonomies attached
- ☐ ACF field names agreed with Role 5 and frozen
- ☐ All 4 CPT field groups reworked to agreed names with missing fields added
- ☐ All 5 global field groups created with REST enabled
- ☐ `acf-json/*.json` updated — 9 files total (4 CPT + 5 global)
- ☐ All 5 documentation files rewritten to full specification
- ☐ `rest-api-exposure-checklist.md` usable as a contract document by Role 5
- ☐ Frontend `api/wordpress.js` updated with all CPT helpers
- ☐ REST endpoints verified returning 200 with `acf` key and correct field names
- ☐ Taxonomy terms appearing in CPT REST responses
- ☐ At least one published test entry per CPT
