

RI.UVT.RO Redesign

Role 4 Implementation Plan

UI Designer + Frontend Implementer

Headless WordPress + React Environment

1. Role Overview

The UI Designer + Frontend Implementer defines the visual identity of the platform and transforms it into a real user-facing interface. This role ensures visual consistency, clarity, responsiveness, accessibility, and polished execution across the React frontend while staying aligned with WordPress-managed content.

2. Phase 1: Visual Audit and Benchmarking

Actual Work

- Analyse the current website visual presentation.
- Identify:
 - Inconsistent styles
 - Weak typography usage
 - Poor spacing discipline
 - Weak visual hierarchy
 - Outdated component styling
- Research comparable university and international platforms.
- Identify best practices in:
 - Academic web design
 - Institutional trust design
 - International accessibility
 - Mobile-first presentation

Deliverable

- Visual audit report and curated inspiration references.

3. Phase 2: Design System Definition

Actual Work

- Define the visual system:
 - UVT-aligned color palette
 - Typography scale (headings, body text, labels)
 - Spacing system
 - Radius / shadows / borders
 - Grid logic and containers
- Define reusable UI components:
 - Buttons
 - Cards
 - Notices
 - Forms
 - Tables
 - Hero blocks
- Establish rules for:
 - Consistent alignment
 - Visual hierarchy
 - State feedback (hover, focus, active)
 - Responsive behaviour

Deliverable

- Documented design system ready for implementation.

4. Phase 3: Page Layout and Route Design

Actual Work

- Design layouts for key frontend routes:
 - Homepage
 - Programme pages
 - News / announcements
 - Student support pages

- Contact page
- Search / listing pages
- Create:
 - Hero structures
 - Content sections
 - CTA areas
 - Listing layouts
 - Footer content zones
- Produce wireframes or interface mockups.

Deliverable

- Layout blueprints ready for React implementation.

5. Phase 4: Frontend UI Implementation

Actual Work

- Translate designs into the React frontend:
 - CSS / utility styling system
 - Responsive layout components
 - Shared style tokens
- Implement UI components:
 - Hero sections
 - Cards and grids
 - CTA blocks
 - Information panels
 - Navigation visuals
 - Forms and inputs
- Ensure UI works with WordPress API-fed content.

Deliverable

- Functional interface integrated into the React frontend.

6. Phase 5: Responsive Design and Adaptation

Actual Work

- Ensure layouts adapt across:
 - Desktop
 - Laptop
 - Tablet
 - Mobile
- Adjust:
 - Spacing
 - Typography scaling
 - Component stacking
 - Navigation behaviour
 - Content density
- Prevent layout breakage and overflow issues.

Deliverable

- Fully responsive production-ready interface.

7. Phase 6: Visual Consistency and Refinement

Actual Work

- Review all routes for:
 - Consistency of styles
 - Alignment and spacing
 - Readability
 - Visual trust and professionalism
- Refine:
 - Component appearance
 - Animation subtlety
 - Hierarchy emphasis
 - Hover / focus feedback

Deliverable

- Cohesive and polished visual frontend.

8. Collaboration with Team

Actual Work

- Work with Role 1:
 - Align UI components with frontend architecture
- Work with Role 2:
 - Ensure visual clarity supports usability
- Work with Role 3 and Role 6:
 - Ensure content models support intended layouts
- Work with Role 8:
 - Resolve accessibility and responsive issues

Deliverable

- Unified visual implementation across backend content and frontend routes.

9. Final Output Responsibilities

- Complete visual design system
- Route and page layout structures
- Implemented React UI components
- Fully responsive interface
- Consistent frontend styling standards
- Polished institutional visual identity

This role ensures the platform is not only functional, but visually coherent, modern, engaging, and trustworthy.
