

RI.UVT.RO Redesign

Role 5 Implementation Plan

React Developer — Pages and Components

Headless WordPress + React Environment

1. Role Overview

The React Developer — Pages and Components is responsible for building the public-facing website users actually interact with. This role transforms the defined architecture, UX logic, and UI system into functional React routes, reusable components, and dynamic pages powered by WordPress REST API data.

2. Phase 1: Frontend Setup and Configuration

Actual Work

- Set up frontend workspace:
 - React + Vite + TypeScript project
 - Dependency installation
 - Routing libraries if required
- Configure development environment:
 - `frontend/.env.local`
 - API base URL connection
 - Local development scripts
- Align project structure with frontend architecture.

Deliverable

- Working React frontend ready for route and component development.

3. Phase 2: Core Route Development

Actual Work

- Create main routes:
 - Homepage
 - Generic content pages

- Contact page
- Programme pages
- Support / information pages
- News / announcements views
- Define page structure inside routes:
 - Layout wrappers
 - Shared containers
 - Section composition

Deliverable

- Functional frontend routes supporting major content areas.

4. Phase 3: Reusable Components and UI Systems

Actual Work

- Create reusable components:
 - Cards
 - Buttons
 - Hero sections
 - Lists
 - Content grids
 - Notices
 - CTA blocks
- Ensure:
 - No duplicated page logic
 - Reuse across multiple routes
 - Clean props and state patterns
- Integrate with design system defined by Role 4.

Deliverable

- Modular reusable React component library.

5. Phase 4: API Integration and Dynamic Content Rendering

Actual Work

- Connect React frontend to WordPress REST API:
 - Pages
 - Posts
 - Custom Post Types
 - Media endpoints
- Build dynamic rendering logic:
 - Lists
 - Detail pages
 - Searchable content views
 - Loading and empty states
- Handle multiple content scenarios gracefully.

Deliverable

- Live API-connected frontend pages using WordPress content.

6. Phase 5: Responsiveness and Structural Integrity

Actual Work

- Ensure frontend adapts across screen sizes:
 - Desktop
 - Laptop
 - Tablet
 - Mobile
- Maintain clean frontend structure:
 - Semantic HTML
 - Accessible component markup
 - Logical DOM hierarchy

Deliverable

- Stable, accessible, and responsive frontend experience.

7. Phase 6: Collaboration and Integration

Actual Work

- Work with Role 4:
 - Ensure implementation matches visual design
- Work with Role 1:
 - Align codebase with architecture standards
- Work with Role 3 and Role 6:
 - Integrate content models and API structures
- Work with Role 8:
 - Resolve bugs, performance issues, accessibility findings

Deliverable

- Fully integrated frontend system aligned with design and backend data.

8. Final Output Responsibilities

- React route system
- Core pages (homepage, generic pages, contact, sections)
- Reusable frontend components
- WordPress REST API data integration
- Responsive and accessible frontend structure
- Scalable maintainable component architecture

This role ensures the platform has a strong public-facing frontend foundation where content, design, and functionality meet cohesively.
