

RI.UVT.RO Redesign

Role 7 Implementation Plan

Content Strategist + Content Integration Contributor

Headless WordPress + React Environment

1. Role Overview

The Content Strategist + Content Integration Contributor is responsible for transforming raw, unstructured, or complex institutional information into clear, accessible, and well-organised digital content. This role ensures the platform communicates effectively with international audiences while fitting the defined structure, React frontend layouts, and WordPress content system.

2. Phase 1: Content Audit and Evaluation

Actual Work

- Review all existing content on the current platform.
- Identify:
 - Overly long or complex text
 - Redundant or outdated information
 - Missing content for key user needs
 - PDF-dependent journeys that should become web pages
- Evaluate clarity for:
 - International students
 - Non-native English speakers
 - Partner institutions
 - Academic staff
- Prioritise content areas requiring immediate rewrite.

Deliverable

- Documented content audit with identified issues and rewrite priorities.

3. Phase 2: Content Restructuring and Editorial Strategy

Actual Work

- Rewrite content for clarity:
 - Shorter sentences
 - Simple vocabulary
 - Professional institutional tone
- Break content into structured sections:
 - Headings and subheadings
 - Summaries
 - Bullet points
 - Process steps
- Align content with user journeys:
 - Incoming vs outgoing students
 - Application flows
 - Contact/support guidance

Deliverable

- Clean, structured, and user-friendly content drafts.

4. Phase 3: WordPress Content Integration

Actual Work

- Insert approved content into WordPress CMS.
- Use:
 - Pages
 - Posts
 - Custom Post Types
 - Structured custom fields
- Ensure content follows:
 - Defined information architecture
 - Naming standards
 - Design system content lengths
- Prepare content for React frontend rendering through API delivery.

Deliverable

- Fully populated backend content system ready for frontend display.

5. Phase 4: Frontend Content Presentation Optimization

Actual Work

- Review how CMS content appears in React pages.
- Improve readability:
 - Better paragraph flow
 - Scannable text blocks
 - Balanced text lengths
- Ensure content works well inside:
 - Cards
 - Listings
 - Detail pages
 - Mobile layouts
- Prevent text overflow and dense unreadable sections.

Deliverable

- Content optimised for modern frontend presentation.

6. Phase 5: Accessibility, SEO, and User Guidance

Actual Work

- Improve accessibility:
 - Clear heading hierarchy
 - Descriptive link text
 - Plain-language phrasing
- Improve discoverability:
 - Metadata recommendations
 - Keyword-aware page titles
 - Internal linking opportunities
- Define clear calls-to-action:

- Apply now
 - Learn more
 - Contact support
 - Download resources
- Ensure each page guides users to the next step.

Deliverable

- Accessible, discoverable, and action-oriented content system.

7. Phase 6: Collaboration and Continuous Alignment

Actual Work

- Work with Role 3:
 - Ensure content fits structure and taxonomy logic
- Work with Role 2:
 - Ensure wording supports user flows
- Work with Role 4:
 - Ensure content matches visual layouts
- Work with Role 5:
 - Validate page content rendering in React routes
- Work with Role 6:
 - Ensure content fields and backend models remain practical

Deliverable

- Fully aligned content across backend, frontend, UX, and IA systems.

8. Final Output Responsibilities

- Complete content audit and restructuring
- Clear, concise, and accessible content across all pages
- Fully integrated WordPress CMS content
- Frontend-ready API-fed content presentation
- SEO and CTA optimisation
- Strong guidance system for real users

This role ensures the platform is not only structured and visually polished, but also understandable, useful, and actionable for real users.
