

RI.UVT.RO Redesign

Role 8 Implementation Plan

QA, Accessibility, Performance, and Frontend Fixes
Headless WordPress + React Environment

1. Role Overview

The QA, Accessibility, Performance, and Frontend Fixes role is responsible for validating the quality, usability, and technical robustness of the full platform. This role ensures the React frontend, WordPress backend, and API communication layer are stable, accessible, performant, and ready for real-world use.

2. Phase 1: Functional Testing

Actual Work

- Test all routes, pages, and features:
 - Navigation links
 - Forms and CTAs
 - Search and filters
 - Dynamic content rendering
 - API-fed page updates
- Identify:
 - Broken links
 - Missing content
 - Incorrect behaviour
 - Data mismatch between CMS and frontend

Deliverable

- Functional testing report with prioritised issues.

3. Phase 2: Responsive and Cross-Device Testing

Actual Work

- Test platform across:

- Desktop
- Laptop
- Tablet
- Mobile devices
- Check:
 - Layout consistency
 - Readability
 - Navigation usability
 - Touch interactions
 - Menu behaviour
- Identify breakpoints and visual defects.

Deliverable

- Responsive testing report with device-specific findings.

4. Phase 3: Accessibility Validation

Actual Work

- Verify accessibility standards:
 - Proper heading hierarchy
 - Sufficient contrast ratios
 - Readable text sizing
 - Semantic HTML output
- Ensure:
 - Keyboard navigation support
 - Clear focus states
 - Descriptive link text
 - Form usability
 - Screen-reader friendliness
- Identify barriers for users with disabilities.

Deliverable

- Accessibility report with corrective actions.

5. Phase 4: Performance Optimization

Actual Work

- Optimise frontend assets:
 - Compress images
 - Remove unnecessary files
 - Optimise fonts
- Improve React delivery:
 - Lazy loading where appropriate
 - Code splitting support
 - Efficient route loading
- Analyse:
 - Page speed
 - Runtime responsiveness
 - Bundle weight
 - API request efficiency

Deliverable

- Optimised frontend performance and loading behaviour.

6. Phase 5: Bug Tracking and Fixing

Actual Work

- Maintain structured bug list:
 - Critical
 - Major
 - Minor
 - Enhancement
- Fix issues directly where appropriate:
 - CSS bugs
 - Layout inconsistencies
 - Minor frontend logic issues
- Coordinate specialist fixes with relevant roles.
- Verify fixes after implementation.

Deliverable

- Resolved bug backlog and stable user experience.

7. Phase 6: Final Review and Launch Validation

Actual Work

- Perform full-platform review:
 - Visual consistency
 - Functional integrity
 - Route completeness
 - Content rendering correctness
- Validate:
 - Navigation clarity
 - Accessibility readiness
 - Technical stability
 - Production build readiness

Deliverable

- Final validation and release-readiness report.

8. Collaboration with Team

Actual Work

- Work with all roles:
 - Report issues to owners
 - Retest after fixes
 - Confirm closure
- Work continuously during development:
 - Do not postpone testing until the final week
- Support quality culture across the project.

Deliverable

- Continuous quality assurance across the whole lifecycle.

9. Final Output Responsibilities

- Functional testing and issue detection
- Responsive and cross-device validation
- Accessibility compliance improvements
- Frontend and API performance optimisation
- Bug tracking and resolution
- Final validation of the complete platform

This role ensures the final platform is not only complete, but reliable, accessible, performant, and ready for real users.
